React Developer Challenge

Welcome to the React Developer Challenge for the position of React Developer. This challenge is designed to assess your proficiency in React and your ability to tackle real-world scenarios. Below are a series of tasks that will test your skills in developing a React application. Complete them to the best of your ability, demonstrating your understanding of React principles and best practices. Good luck!

1. Upon application launch, display the invoice list form.

2. Clicking "Add" should open the create invoice form, resembling the provided figure.

3. Clicking "Add" in the create invoice form should trigger a popup for adding items.

4. From the item popup, enable adding items to the grid.

5. Ensure calculations function as illustrated in the figure.

6. Clicking "Save" should hide the create invoice form and display items in the grid below.
